

True Interactivity for the Most Collaborative Meeting

In a complex writing environment such as meeting rooms and classrooms, TN3F is the ideal solution. The In-Cell Touch and Active Pen, which incorporate state-of-the-art touch technology, provide an unrivaled cursive writing experience. In addition, you can easily connect anytime, anywhere with any device, so that you can hold smart meetings and collaborations. Ultimately, this will help lead your business to success.

Natural Cursive
Writing Experience

Collaboration
& Connectivity

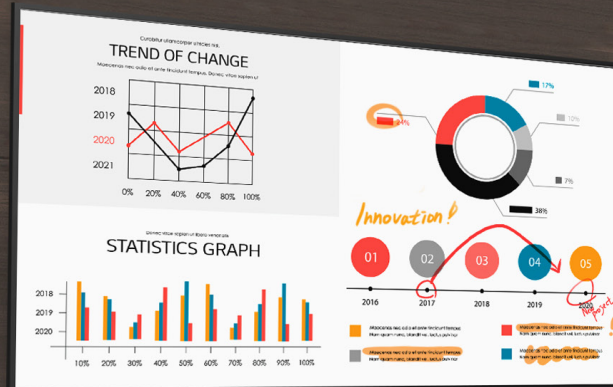

User Friendly
Experience

Picture Quality

In-Cell Touch

The In-Cell touch technology provides advantages in writing performance, visibility, and design because the LCD panel and protective glass are directly bonded with no air gaps.

The In-Cell touch signage delivers a high-quality user experience and boosts your efficiency with its slim design and outstanding writing performance.

Active Pen

Use TN3F's Active Pen to write in a more natural and detailed way. The Active Pen is pressure sensitive, so strokes can be thick or thin, and the user's handwriting can be perfectly reproduced on the screen.

Data Mirroring

TN3F's data mirroring technology enables two-way writing and sharing in real time to remotely share annotations and facilitate collaboration in meetings in any space, anytime and anywhere.

Screen & File Sharing

TN3F's screen sharing provides the content-sharing function with laptops or various mobile devices, enabling more efficient and immersive meetings. Using the IDB DUO App, files can be directly shared between the Interactive Digital Board and the client devices, so you can carry out smarter meetings.

Interactive UX/UI (New Interactive Display App)

New Interactive Display Application supports intuitive UX/UI that includes a simple launcher menu, easy control center, and seamless tool bar.

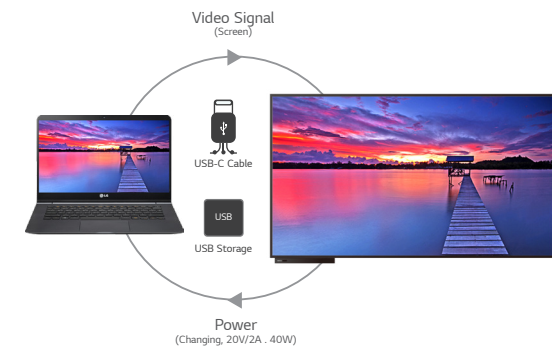

All-in one

The TN3F integrates both webOS and IDB apps into a high performance SoC, without a PC. The IDB mode can be instantly started with just one touch.

USB-C Type Ready

The TN3F provides video, audio, and power all in one, making it quick and easy to connect to other devices for smarter meetings. It also supports USB-C type cables that can replace other connectors, such as USB-B, USB-A, HDMI, and 3.5mm audio cables.

True Color, Immersive View

The TN3F is large enough to display content and catch the attention of various meeting participants. The IPS panel clearly conveys content at various angles, regardless of where participants are sitting. Each pixel of the IPS panel reproduces the actual image's color without any distortion.

Vivid Color Details with Ultra HD

Using UHD resolution will allow you to view details at a resolution that is four times higher than FHD, even while zoomed in. Various content such as documents, images, and videos are displayed without any distortion of image quality, which is especially important in a complex business environment.
