## About Barracuda Networks, Inc (NYSE: CUDA)

Barracuda Networks, Inc. combines premises-based gateways and software, virtual appliances, cloud services, and sophisticated remote support to deliver comprehensive content security, data protection and application delivery solutions. The company's expansive product portfolio includes offerings for protection against email, web and network-intrusion threats as well as products that improve application delivery and network access, message archiving, backup and data protection.

Protecting users, applications, and data for more than 150,000 organizations worldwide, Barracuda Networks has developed a global reputation as the go-to leader for powerful, easy-to-use, affordable IT solutions. The company's proven customer-centric business model focuses on delivering high-value, subscription-based IT solutions for security and storage.

### THE BARRACUDA NETWORKS DIFFERENCE

Barracuda Networks continues to gain wide acclaim from customers, media, and analysts by offering exceptional customer service and top-notch products. Companies and organizations of all sizes rely on Barracuda solutions for six key reasons:

- **Rapid deployment.** Our advanced, integrated solutions are uniquely easy to install and configure.
- **No specialized expertise required.** All Barracuda products feature intuitive interfaces that ensures easy, centralized product management with no need for specialized training.
- **Multiple deployment options.** Available in hardware, virtual, cloud-based, and hybrid configurations, Barracuda products are ideal for a wide variety of network infrastructure types.
- **No support phone trees.** Specially trained Barracuda support technicians are available 24x7 to answer customer calls and provide live support.
- **Automatic product updates.** Every Barracuda solution is backed by Barracuda Energize Updates, which automatically ensure continuous protection against the latest threats.
- **Low total cost of ownership.** Barracuda Networks solutions are easy to scale for performance and increased capacity as organizations grow, protecting your investment and keeping total cost low.

#### Barracuda Labs and Barracuda Networks Technical Support

Every Barracuda Networks product is backed by world-class services and technical support. To keep systems maintenance-free, Barracuda Energize Updates ensure that Barracuda Networks products are kept up-to-date to mitigate the latest security threats. Barracuda Energize Updates are backed by Barracuda Labs, a 24x7 operations center where engineers monitor the Internet and the industry for the latest threats, applications, websites, and trends.

Barracuda Networks Technical Support is staffed with IT experts ready to solve technical issues. With technical support centers across the globe, Barracuda Networks is staffed 24x7 to provide immediate help without phone trees. Barracuda Networks Technical Support is available in three levels, with the highest Premium Support level providing a dedicated account manager and technical support personnel familiar with an organization's IT environment.

All Barracuda Networks appliances are built on hardened, industrial-strength equipment. Beyond the standard warranty, Barracuda Networks Technical Support offers the Instant Replacement program, where Barracuda Networks will ship replacement units within one business day to keep organizations up and running.

## REFERENCES

Barracuda Networks has thousands of customers ranging from small and medium business to Fortune 1000 companies that span all industry verticals. Below is a sample of Barracuda Networks' expansive Barracuda NG Firewall customer portfolio.

*Within the first two months of deployment we had already realized dramatic cost savings per location as well as increased network traffic bandwidth. In addition we have secured a solution that allows for traffic prioritization and routing in case of a connectivity loss. Barracuda Networks is a highly reputable company throughout the world, known for its security expertise. We are convinced that with Barracuda Networks as the company behind our firewall infrastructure, we will be well-served and supported for many years to come.*

CIO,  
RHI AG

*As a company with internationally distributed facilities, the centralized management concept particularly impressed us – Barracuda Networks therefore quickly became our partner of choice.*

Manager of IT Service and  
Infrastructure Technology,  
ODLO Sports Group AG

## SAMPLE CUSTOMERS

## Barracuda NG Firewall

### Application & Identity-Aware Protection for Distributed Network Environments

The Barracuda NG Firewall is a family of hardware and virtual appliances designed to protect network infrastructure, improve site-to-site connectivity and simplify administration of network operations. Beyond its powerful network firewall and VPN technologies, the Barracuda NG Firewall integrates a comprehensive set of next-generation firewall technologies, including identity-aware Application Control, intrusion prevention, web filtering, antivirus, anti-spam, and Network Access Control.

The Barracuda NG Firewall features intelligent site-to-site traffic management capabilities that optimize both availability and performance of the Wide Area Network (WAN). Administrators can control application-level routing and prioritization of traffic across multiple links, tunnels, and traffic conditions. Supported link types include dedicated lines, xDSL, 3G/UMTS wireless mobile networks, and any other link types presented as a copper or optical Ethernet link.

Leading next-generation firewall capabilities, industry-leading centralized management, highly resilient VPN technology combined with intelligent traffic management capabilities, allow customers to save line costs and increase overall network availability.

AVAILABLE AS  
**Virtual Appliances**   
see page 27

#### Inside the Technology

What are the immediate benefits of deploying a Barracuda NG Firewall?

**Improved security posture** - From a security perspective, organizations can improve their security posture by integrating previously disparate security functions, including web filtering, malware protection, email security, intrusion prevention, and Application Control into a single platform.

**Achieve full application awareness** - Application Control allows for accurately identifying a vast number of protocols and applications (BitTorrent, Skype, Instant Messaging, etc.) that are traversing the network. Even if they are using advanced obfuscation techniques, port-hopping, or encryption. Barracuda's Application Control can block the usage of unwanted applications, control and throttle acceptable traffic, and preserve bandwidth for business-critical applications to ensure business continuity.

**Achieve full user-based visibility and control** - The Barracuda NG Firewall provides seamless integration with all authentication methods (e.g., Active Directory, RADIUS, LDAP/s, etc.) to facilitate policy configuration based on the actual user and group information and not just IP addresses.

**Corporate network optimization** - From a global network management perspective, you can reduce administrative overhead through centralized management capabilities that serve thousands of nodes and reduce hard dollar costs by better managing WAN links and link bandwidth. State-of-the-art failover and bandwidth management capabilities make sure that your business-critical traffic receives the bandwidth it deserves, even in case of link-loss.

**Accelerated troubleshooting** - At a help desk and troubleshooting level, the Barracuda NG Firewall provides unprecedented levels of visibility into individual network flows, arming the network engineer with powerful tools to diagnose and maintain the network.

# SOLUTION ADVANTAGE 1

## Uncompromised Protection and Availability for Corporate Network Boundaries and Segmentations

The more important global communications are for a company, the more important it is to protect corporate network boundaries. After all, the perimeter is still the most important front line of defense against hackers and malicious code. The performance of security solutions at the Internet and VPN gateway levels will determine whether or not external attacks can penetrate your network or can be blocked at the outset.

As the most successful attacks mounted today are within the network, a single remote access link with an unsecured external PC or laptop is often sufficient to allow hackers and malicious codes to open a back door into the company. There are also hazards that arise as a result of intentional or unintentional misconduct by some employees. This threat cannot be mastered with perimeter protection alone, because attackers are already behind the network limits.

### OUR SOLUTION FOR YOUR NETWORK SECURITY NEEDS

Crucial business processes run smoothly thanks to multi-gigabit firewall performance and integrated bandwidth management. By combining a stateful inspection firewall with intrusion prevention, denial-of-service protection, intelligent application-selective bandwidth, and multipath management plus VPN technology, guarantee constant availability and protection.

Protection is no longer limited to the perimeter and branches, but extends to all sensitive network areas. Flexible deployment and support for virtualized environments is crucial for successful realization of clean bit structures in your LAN.

FEATURE	BENEFIT
Combination of stateful inspection, application control, and intrusion prevention	Maximum network protection at all data traffic levels
Fully developed high availability functionality	Interruption-free availability for scheduled and unscheduled downtime
Secure VPN connectivity with traffic intelligence	Ultimate traffic optimization for the integrated VPN and external service level agreements (SLAs)
Central management	Allows organizations to uphold and improve internal and external service level agreements (SLAs)
Correlation of global and local rule sets	Allows a maximum of scalability for controlling and monitoring thousands of devices
Real-time monitoring, logging and statistics	Complete and immediate control of all company network processes
Complete reporting	Costs transparency for enterprises
Extendable by secure application gateways (SSH and SSL proxies)	Compliance with different regulations by maximum control of external network accesses
Extendable by secure web access, WAN protection, and optimization and network access control solutions	As the backbone of a highly scalable and flexible communication protection platform, the Barracuda NG Firewall enables companies to increase their corporate IT security

#### BUSINESS ALIGNMENT

Although IT security can hardly contribute directly to business success, security solutions can have the same enemies as the business. With Barracuda NG Firewalls IT security becomes a vital part of a business enabling environment.

#### COST EFFICIENCY

- **Lifecycle Costs** - Extendable Barracuda NG Firewalls offer companies sustainable investment protection. Central management covers centralized update management and comprehensive hardware replacement options.
- **Deployment Costs** - Unique management functions allow for quick and efficient roll-outs.
- **Operating Costs** - Central management saves significant time and effort.
- **License and Hardware Costs** - Unique license and appliances/server hardware combination achieves a maximum of flexibility and cost optimization.

# SOLUTION ADVANTAGE 2

## WAN Protection and Optimization

In a globally networked organization, protecting the network and optimizing for performance are two of the biggest IT challenges that distributed organizations face today. WAN Optimization allows increased reliability, improving application quality on the one hand and reducing line costs on the other. Ideal solutions combine all requirements for remote connectivity, security, application control, and network performance improvement in a fully integrated product and under the same scalable management.

### OUR SOLUTION FOR YOUR WAN PROTECTION AND OPTIMIZATION NEEDS

The Barracuda NG Firewall appliances include all security, connectivity, and optimization services commonly needed at remote locations and branch offices. This effectively enables enterprises to secure the whole network, from headquarters to all remote locations. Integrated Application Layer Control makes sure only allowed traffic passes through the firewall while reaction times are optimized. WAN compression reduces bandwidth load by local caching of network traffic (data deduplication) as well as caching of frequently accessed web content on the web proxy. The built in traffic intelligence engine prioritizes data flows and takes care of smart traffic distribution among dedicated lines, xDSL, ISDN, satellite

uplinks, 3G/UMTS or multi provider uplinks. Every uplink line is monitored to allow for almost instantaneous fail-safe redistribution and reprioritization of traffic in case of failure. The Barracuda NG Firewall ensures that all remote offices can always rely on accessing essential resources with adequate performance while reducing overall cost of the WAN network.

#### BUSINESS ALIGNMENT

Hackers are not the biggest threat to corporate communications. Line, link, and other unexpected data line failures are. The Barracuda NG Firewall's traffic intelligence technology not only protects the most important applications from hackers, spyware, and viruses, but also keeps applications available even in the event of most uplink failure scenarios.

#### COST EFFICIENCY

- **Line Costs** - The Barracuda NG Firewall allows usage, failover, and bundling of multiple cost-effective types of Internet connections and intelligent data reroute in case of uplink failure, resulting in decreased line costs and increased availability.
- **Lifecycle Costs** - Extendable Barracuda NG Firewalls offer companies sustainable investment protection. The central management covers centralized update management and comprehensive hardware replacement options.
- **Deployment Costs** - Unique management functions allow for quick and efficient roll-outs.
- **Operating Costs** - Completely GUI driven central management for all aspects of the solution saves significant time and effort compared to competing products.

FEATURE	BENEFIT
Application-based provider selection	Depending on the application, the least expensive route is selected, while simultaneously increasing availability.
Traffic compression	Cost savings through higher available virtual bandwidth available to applications.
Data deduplication	Generic large dictionary compression to the byte stream inside the VPN tunnel between two Barracuda NG Firewall appliances. For typical network traffic, compression rates may reach up to 95%, effectively reducing the bandwidth needed at remote locations.
Instantaneous activation of backup uplinks	Automatic activation and switch to alternate uplinks. Even failed uplink hardly yields any noticeable loss of connectivity.
Intelligent traffic management and QoS	Business-sensitive data and applications are given preference to enable continuity in business operations. Bandwidth is limited for certain low priority applications.
Web cache proxy	Reduced bandwidth requirements for Internet access and better user experience.
Distributed Internet breakouts	Improved user friendliness and ease of use without compromising security or increasing costs.
Graphical interface for configuration and control	Cost savings resulting from greater scalability and better manageability.

# SOLUTION ADVANTAGE 3

## Secure Web Access

A multitude of undesirable contents penetrates companies via email and the Internet. The never-ending flood of spam blocks network resources and reduces employee productivity. Dubious websites disrupt the working atmosphere and can, under certain circumstances, even lead to legal problems for organizations. Increasingly cunning malicious code like Trojans, spyware, keyloggers, back doors, etc. steal or manipulate business information and bring critical processes to a standstill. Often, business secrets are also transferred easily to attackers via protocols such as HTTPS, because this data traffic is still a closed book for many security products.

Companies used to provide Internet connectivity through central proxy and content security gateways to assure consistent security policies, with state-of-the-art antivirus patterns. While this concept has proved reliable, it is also costly since the WAN infrastructure is based either on dedicated WAN networks (e.g., MPLS) with high bandwidth costs or cheaper VPN via public Internet. Routing all Internet traffic to headquarters and then exiting to the Internet results in high data volumes and "traffic-jams" for business-critical applications between branch offices and headquarters.

### OUR SOLUTION FOR YOUR CONTENT SECURITY & SECURE WEB ACCESS NEEDS

Barracuda NG Firewalls provide comprehensive and coordinated content security functionalities so that web- and email-based risks and spam are reliably repelled at the perimeter. The Barracuda NG Firewall also detects malicious software that is hidden, embedded, or repeatedly compressed – and with Release 5.4.3 (scheduled for Q1 2014), it will even detect malware that has been hidden in SSL-encrypted HTTPS. The Barracuda NG Firewall uses the world's most comprehensive and permanently updated URL database to block connections to undesirable or potentially dangerous web sites. Data communication is thus protected at every level – a significant prerequisite for smooth and unobstructed business processes and stable productivity.

Using Barracuda NG Firewalls, companies can also use distributed secure web access at every branch office without loss of security and manageability for all remote located content security infrastructure. The powerful Barracuda NG Control Center and comprehensive content security functionality not only assure high security, they also boost overall efficiency and bring significant cost cuts.

FEATURE	BENEFIT
Barracuda NG Malware Protection	Second security layer at the perimeter to protect against spyware, viruses, and other malicious code
Barracuda NG Web Filter	Stops access to inappropriate or offensive websites
Integrated with Barracuda Web Security Service	Malware and content scanning in the cloud enables secure wire speed Internet access for remote locations and low-end units
Spam Filter	Protection from unwanted emails in your company network
High availability and use of different providers	Uninterrupted Internet access even during device or line failure
Real-time accounting	Retrieve data on individual or collective gateway activities
Troubleshooting & diagnostics	Easy troubleshooting and disaster recovery
Centralized antivirus pattern updates and version monitoring for branch offices	Control over a global anti-malware infrastructure
Full content security enhancements at all branch offices, centrally managed	Transformation of secure web access into an inherent part of the network infrastructure
Lifecycle management	Flexible administration that suits your company strategy Auditable traceability of configuration changes

#### BUSINESS ALIGNMENT

Increased efficiency based on channelled Internet usage and faster web access as well as comprehensive protection for Internet users around the globe. Employee satisfaction is also improved.

Barracuda NG Firewalls also prevent companies from unintentional involvement in cyber crime.

#### COST EFFICIENCY

- **Line Costs** - Use less expensive, decentralised bandwidth that offers increased availability and cost savings of up to 90%.
- **Lifecycle Costs** - Extendable Barracuda NG Firewalls offer companies sustainable investment protection. Central management covers centralised update management and comprehensive hardware replacement options.
- **Deployment Costs** - As a result of the Barracuda NG Firewall's fully integrated functions, rollouts only take a couple of hours instead of weeks.
- **Operating Costs** - Industry-leading centralized management lets you save significant time and effort compared to other solutions.
- **License and Hardware Costs** - Unique subscription model ensures that companies don't incur any surprise expenses.

# SOLUTION ADVANTAGE 4

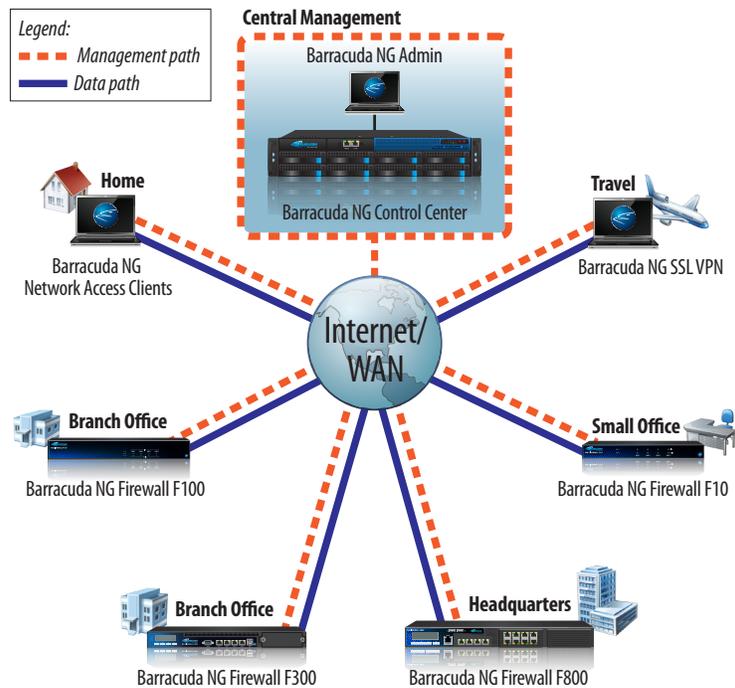

## Central Management of the Entire Security Infrastructure

Security-conscious companies and managed security providers are confronted with a rapidly increasing number of gateways in their networks. These gateways have to be rolled out, configured, and continuously monitored. It is irrelevant how convenient the installation and ongoing maintenance are for a single gateway. Managing hundreds or thousands of systems is definitely a cost-intensive process that requires an enormous effort by qualified staff.

At the same time a corporate security policy must be maintained constantly at all gateways. As a result, the individual system configurations' are increasingly interwoven. Even just a straight forward site-to-site VPN tunnel presumes that at least two gateways are coordinated with each other. In larger environments with hundreds of such installations, this may lead to massive configuration and operational overhead.

### OUR SOLUTION FOR YOUR SECURITY MANAGEMENT NEEDS

The Barracuda NG Control Center combines the advantages of a device- and policy-based management architecture. Administrators are kept informed at all times on the status of remote gateways and can consistently implement centrally defined security rules at every location. Furthermore, the integrated revision control system increases auditing ease for the infrastructure and cuts overheads.

Typical deployment of Barracuda NG Firewall with centralized management

#### BUSINESS ALIGNMENT

Finance and accounting processes are supported by central control of infrastructure resource use. Central and efficient management accelerates the implementation of integration processes. Change traceability protects from faulty operations and any possible negative impacts.

#### COST EFFICIENCY

Management is the most critical expense factor of any security infrastructure. Customers report that time and effort needed for deploying, upgrading, extending and operating Barracuda NG Firewalls has decreased by a factor of three to six compared with other products.

- **Lifecycle Costs** - Central lifecycle management drastically decreases time spent for deploying patches. Even devices with differing software versions can be centrally managed at the same time.
- **Deployment Costs** - Rollouts of hundreds of devices within a few weeks instead of months.
- **Operating Costs** -The unique and versatile features of Barracuda NG Control Centers and Barracuda NG Firewalls dramatically lower operating costs.

FEATURE	BENEFIT
Central management	Increased security and reduced costs.
Revision control system	Ideal revision capabilities and simple restoration of proven configurations.
GTI (Graphical Tunnel Interface) for VPN configurations	Simple drag & drop configuration and visualization of VPN tunnels.
Scalability	The Barracuda NG Control Center grows with organizational needs and requirements.
Fast disaster recovery	The Barracuda NG Control Center can be restored in just a few minutes with only two configuration files.

# TECHNOLOGY ADVANTAGE 1

## Application Control - Regain Control of the Network

By integrating Application Control into its core firewall engine, the Barracuda NG Firewall can identify and enforce security policies on more sophisticated applications that may hide their traffic inside otherwise "safe" port/protocols such as HTTP. Instant messaging (IM) and peer-to-peer (P2P) applications are particularly notorious for opening backdoors into the network and spreading malicious content, thus ultra-reliable application control for policy enforcement is required.

The Barracuda NG Firewall provides a powerful and extremely reliable detection and classification of network traffic-based applications and protocols by combining Deep Packet Inspection (DPI) and behavioral traffic analysis - even if the protocols are using advanced obfuscation, port hopping techniques, or encryption.

### GRANULAR APPLICATION CONTROL

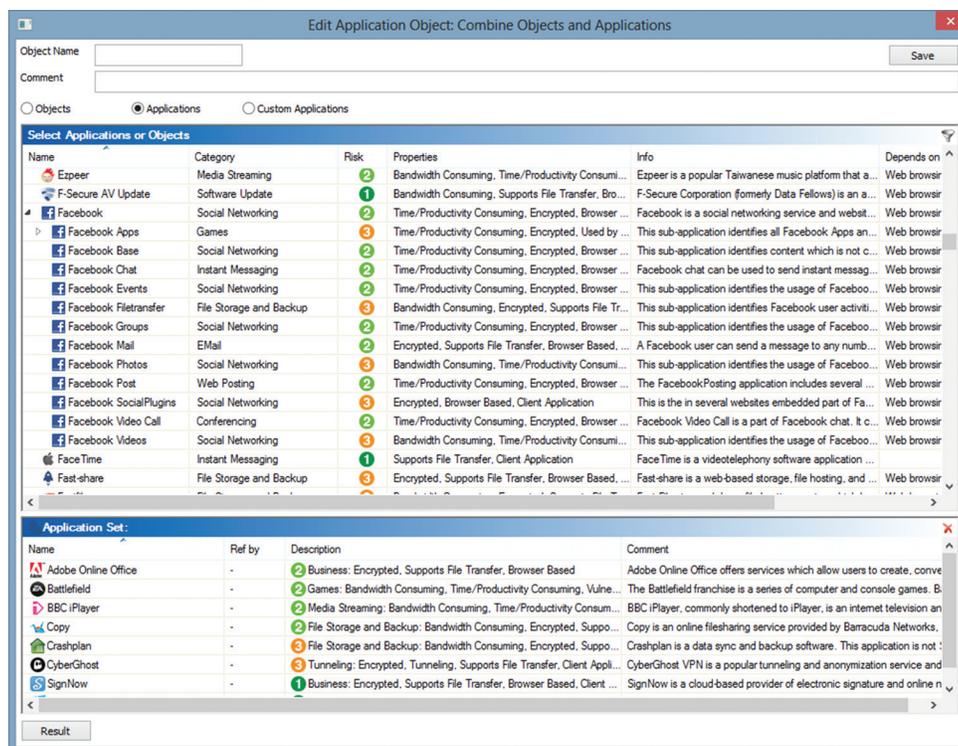

The Barracuda NG Firewall allows the creation of dynamic application policies and allows establishing acceptable use policies for users and groups by application, application category, location, and time of day. In a nutshell it enables administrators to:

- block unwanted applications for certain users or groups
- control and throttle acceptable traffic
- preserve bandwidth and speed-up business critical applications to ensure business continuity
- enable or disable specific application sub-functions (e.g., Facebook Chat, YouTube postings, or MSN file transfers)
- intercept SSL-encrypted application traffic

Name	Protocol	Application	Content	User	Schedule	QoS	Action
Block-Skype	Any	Skype	Any	Any	Always	N.A.	Deny
Block-P2P-Traffic	Any	AppleJuice, BitTorrent, DirectConnect, eDonkey, Filetopia	Any	Any	Always	N.A.	Deny

ALL-APPS	Any	Any	Any	Any	Always	VofP(A ID2)	Pass

*Create granular application usage policies based on applications, users, groups, and time, regardless of source, destination, port or protocol*

*Intuitive configuration of applications objects allows easy control and enforcement of more than 1,200 Web 2.0 and business applications*

## ACHIEVE FULL USER-BASED VISIBILITY AND CONTROL

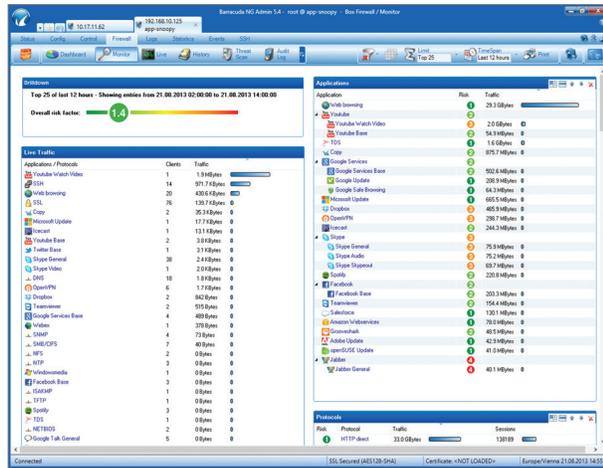

The Barracuda NG Firewall provides seamless integration with all authentication methods (e.g. Active Directory, RADIUS, LDAP/s, etc.) to facilitate policy configuration based on the actual user and group information and not just IP addresses.

## RICH REPORTING AND DRILL-DOWN CAPABILITIES

Real-time and historical application visibility shows application traffic on the corporate network for intelligent adjustment of the corporate application use policies.

Information on exporting reports is available in section "Barracuda NG Report Creator" on page 26.

*New protocol and application definition updates are provided via Energize Updates to ensure continuous effectiveness of the Application Control capabilities.*

*The live view provides real-time visibility of application usage, current sessions, and user activity. Any network traffic can be immediately terminated or reprioritized by changing the respective QoS class.*

**Note:**

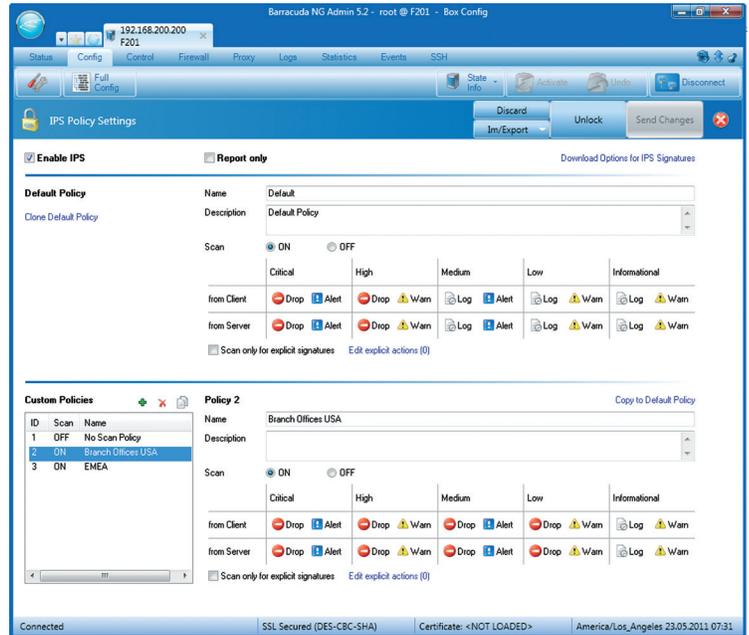

A valid Energize Updates subscription is required to enable the full feature set of Application Control. Without valid Energize Updates, Application Control will detect application traffic on the network but customers will not be able to block or throttle traffic based on the successful detection.

# TECHNOLOGY ADVANTAGE 2

## Intrusion Detection & Prevention System - Complete and Comprehensive Real-Time Network Protection

### OVERVIEW

The Barracuda NG Firewall Intrusion Detection and Prevention System (IDS/IPS) can strongly enhance network security by providing complete and comprehensive real-time network protection against a broad range of network threats, vulnerabilities, exploits, and exposures in operating systems, applications, and databases preventing network attacks such as SQL injections or buffer overflows. In addition, the IDS/IPS keeps spyware and worms out of the corporate network to prevent fraud and maintain strict privacy. By constantly monitoring network and system activities for malicious or suspicious behavior, the Barracuda NG Firewall can react in real-time to block and prevent such activities. In case an attack is detected, the Barracuda NG Firewall can drop the offending packets while still allowing all other traffic to pass, or just detect and log the intrusion attempt. Depending on the severity of the threat, highly granular actions can be assigned on a per firewall rule base enabling the Barracuda NG Firewall to allow, block, or log questionable traffic based on severity, location, user/group, type, and application.

*Easy-to-use IDS/IPS policy settings*

### ROBUST PROTECTION AGAINST A MULTITUDE OF THREATS & EXPLOITS

The Barracuda NG Firewall provides immediate out-of-the box protection against a vast number of exploits and vulnerabilities in operating systems, applications, and databases to prevent network attacks such as:

- SQL Injections
- Arbitrary Code Executions
- Access Control Attempts and Privilege Escalations
- Cross-Site Scripting
- Buffer Overflows
- Denial of Service (DoS) and Distributed Denial of Service (DDos) Attacks
- Directory Traversal Attempts
- Probing and Scanning Attempts
- Backdoor Attacks, Trojans, Rootkits, Viruses, Worms and Spywares

### COUNTERING IPS EVASION AND OBFUSCATION TECHNIQUES

The Barracuda NG Firewall is able to identify and to block the advanced evasion attempts and obfuscation techniques that are widely used by attackers to circumvent and trick traditional signature based intrusion prevention systems such as

- Packet Anomalies
- IP Fragmentation
- TCP Stream Reassembly
- RPC Defragmentation
- FTP Evasion Protection
- URL Decoding
- HTML Decoding and Decompression
- TCP Split Handshake Protection

## ADDITIONAL NETWORK PROTECTION TECHNIQUES

In addition to the comprehensive intrusion pattern database and the advanced anti-evasion countermeasures, the Barracuda NG Firewall offers a wide range of transport layer protection mechanisms such as:

- IP Spoofing Protection
- Portscan and Sniffing Protection
- TCP SYN Flood Protection
- ICMP Flood Protection
- Duplicate Local IP Detection
- Resource Exhaustion Protection
- ARP Spoofing and Trashing Protection

The threat scan view displays all events related to IDS/IPS and Application Control

## AUTOMATIC SIGNATURE UPDATES

As part of the Barracuda Energize Updates subscription, automatic signature updates are delivered on a weekly schedule or on an emergency basis to ensure that the Barracuda NG Firewall is constantly up-to-date. If the firewall unit is centrally managed, the pattern updates are conveniently distributed by the Barracuda NG Control Center.

### Note:

A valid Energize Updates subscription is required to enable IDS/IPS and to receive automatic signature updates.

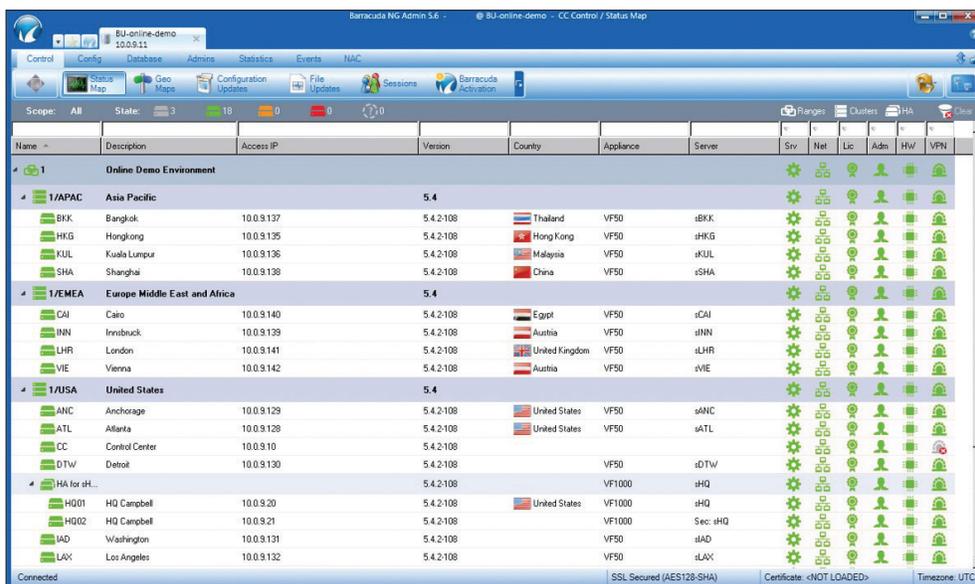

# TECHNOLOGY ADVANTAGE 3

## Management Concept of Barracuda NG Firewall

Barracuda NG Admin is a simple and easy-to-use graphical configuration and management application that operates on all current Microsoft operating systems (Windows XP, Windows Vista, Windows 7, and Windows 8 - requires .NET). All configuration changes are collected locally and only need to be activated when needed. With Barracuda NG Admin, it is possible to manage and configure multiple Barracuda NG Firewalls simultaneously by directly connecting to the appliance and executing configuration changes locally.

The dashboard displays a live view on a selection of important status and statistics data such as top application usage, detected intrusion events, number of active sessions, etc.

The Status Map displays an overview of all centrally managed Barracuda NG Firewall gateways.

### KEY BENEFITS

- No installation needed
- All functions of the Barracuda NG Firewall can be configured and managed via the graphical user interface
- Same look and feel whether a single Barracuda NG Firewall or thousands managed via Barracuda NG Control Centers
- Simultaneous access to multiple gateways
- Admin private key management
- Trust verification of accessed boxes
- Integrated SSH/SCP client
- Integrated web interface for access of other Barracuda products
- Integrated command-line interface for optional scripting purposes
- Encrypted communication (SSL, AES-128)
- Fast user interface that responds without lag allowing quick and efficient configuration
- Configuration changes may be collected and applied in bulk at a later time

### Compatible with

1 Virtual appliance models are available in 25, 50, 100, 250, 500, and unlimited user levels.  
 Note that the virtual appliance models VF25-VF1000 are limited to two CPU cores. Model VF2000 supports 4 CPU cores, model VF4000 supports 8 CPU cores, and model VF8000 supports 16 CPU cores.  
 2 Measured with large packets (MTU1500)  
 3 Measured with large packets (MTU9000)  
 4 VPN throughput using AES-128 NOHASH

5 Depends on hardware  
 6 While it is technically feasible and fully supported to run Barracuda NG Malware Protection and Barracuda Web Filter on this unit, Barracuda Networks recommends offloading Malware Protection and Web Filtering functions to the Barracuda Web Security Service (cloud service).  
 7 Recommended only for small remote locations and not in conjunction with anti-malware or web filtering at the same time.

# Subscriptions

for the Barracuda NG Firewall

## AVAILABILITY MATRIX

BARRACUDA NG FIREWALL	F10	F100/ F101	F200/ F201	F280	F300/ F301	F400	F600	F800	F900	VX
Energize Updates <sup>1</sup>	Optional									
Instant Replacement <sup>2</sup>	Optional									
Premium Support <sup>3</sup>	Optional									
Barracuda NG Web Security Service	Optional									
Barracuda NG Malware Protection		Optional								
Barracuda NG Web Filter		Optional								
Barracuda NG SSL VPN and NAC			Optional							

<sup>1</sup> Energize Updates are also available for Barracuda NG Control Center hardware and virtual appliances. Purchase of one year of Energize Updates subscription is required for every new unit.

<sup>2</sup> Instant Replacement subscription is also available for Barracuda NG Control Center models C400 and C610.

<sup>3</sup> Premium Support is also available for Barracuda NG Control Center hardware and virtual appliances.

### High Availability ("HA"):

All subscriptions have to be licensed separately for the HA partner. For further information please contact your local partner or Barracuda sales at [sales@barracuda.com](mailto:sales@barracuda.com).

## ENERGIZE UPDATES

This subscription provides:

- Firmware maintenance, which includes new firmware updates with feature enhancements and bug fixes as they are made available.
- Security updates to patch or repair any security vulnerabilities.
- All released updates for the Application Control database.
- IPS signature and pattern updates.
- The Barracuda Web Filter
- Basic Support, which includes 24x7 email support and phone support between the hours of 9:00 a.m. and 5:00 p.m. Monday through Friday.

### Note:

Energize Updates are available for all Barracuda NG Firewall hardware and virtual models. Available as 1, 3, and 5 year subscriptions. Purchasing at least 1 year of Energize Updates is required with every Barracuda NG Firewall.

## INSTANT REPLACEMENT

Provides an extended warranty, ships a replacement unit overnight upon notification of a failed unit, assists with data migration to new unit, and provides a RAID hard disk replacement as applicable.

In addition, the Instant Replacement service includes:

- Enhanced Support, which provides phone and email support 24x7.
- Hard disk replacement on Barracuda Networks models that have swappable RAID drives. Barracuda Networks will ship via standard shipping a hard disk replacement. Customer must return the failed hard disk to Barracuda Networks.
- After four years of continuous IR coverage, customer is entitled to a free hardware refresh.

### Note:

Available for all Barracuda NG Firewall hardware models. Instant Replacement must be purchased within 60 days of hardware purchase and is a continuous subscription from date of activation. Available as 1, 3, and 5 year subscriptions.

## PREMIUM SUPPORT

Barracuda Premium Support ensures that an organization's network is running at its peak performance by providing the highest level of 24x7 technical support for mission-critical environments. Customers will benefit from a dedicated account manager and a team of technical engineers who will provide fast resolution of high-priority support issues, ensuring that equipment maintains continuous uptime.

**Note:**

*Available for all Barracuda NG Firewall hardware and virtual models. Premium Support for Barracuda NG Firewall hardware appliances can only be purchased in combination with Instant Replacement. Premium Support may be purchased on Barracuda NG Firewall virtual appliances without Instant Replacement. Available as 1, 3, and 5 year subscriptions. For more information on Premium Support please visit [www.barracuda.com/support](http://www.barracuda.com/support).*

### KEY BENEFITS

- 24x7 global support
- Priority response time to resolve mission-critical issues
- Service Level Agreements (SLAs) to guarantee that issues are resolved quickly
- Dedicated support team that is familiar with your environment
- Proactive monitoring for optimal performance

## ON-SITE COLD SPARE UNIT

The cold spare unit provides a cold standby appliance of the same type as the main unit to Barracuda end customers. This cold standby unit can be activated quickly in case of hardware failure of the active unit. The cold standby appliance includes a "Cold Spare license" for the Barracuda NG Firewall firmware only, no productive use for firewalling or other functions possible. This way the appliance is firmware upgradeable to the patch level that corresponds to the main unit (fully licensed unit). If the main unit fails, the on-site cold spare unit may be used to temporarily host the license and configuration backup ("par" file, including the license) of the failed main unit for a period of up to 15 days.

If the failed unit is covered under Instant Replacement (IR) or within the warranty period, Barracuda Networks will ship a replacement unit of the same type as the failed unit to the customer. The former cold spare unit inherits the license features of the former main unit by a swap with a new license issued, effectively transforming the cold spare to the new main unit. The shipped unit includes a cold spare license and effectively becomes the new cold spare. The customer needs to ship the defective unit to Barracuda Networks or certify destruction. If the customer fails to do so, Barracuda reserves the right to charge the customer for a full Barracuda NG Firewall unit.

# Content Security

## for the Barracuda NG Firewall

### KEY FEATURES

- Customizable blacklists and whitelists
- 95 content categories (for a detailed list, see page 56)
- Multiple category selection
- Temporal constraints
- User specific / group specific restrictions
- Online categorization lookup
- Persistent local cache
- Customizable block pages

### BARRACUDA WEB FILTER

The Barracuda Web Filter enables highly granular, real-time visibility into online activity, broken down by individual users and applications, letting administrators create and enforce effective Internet content and access policies. The Barracuda Web Filter is included in the Energize Updates subscription.

#### **Compatibility and Licensing:**

*Included with Energize Updates subscriptions for Barracuda NG Firewall models F100 and higher, as well as all Barracuda NG Firewall virtual appliances. Unlimited user license with a Barracuda NG Firewall hardware unit. For virtual appliances, the number of protected IPs (capacity) applies. In High Availability (HA) environments, each unit needs to be licensed separately. The Barracuda Web Filter and the Barracuda NG Web Filter cannot be run at the same time and have to be activated separately, one at a time on the Barracuda NG Firewall units.*

### KEY FEATURES

- Customizable blacklists and whitelists
- Filter entire URL string beyond FQDN
- 69 content categories (for a detailed list, see page 57)
- Multiple category selection
- ~100 million entries
- ~100,000 new URL database entries per day
- Temporal constraints
- User specific / group specific restrictions
- Category database
- Local or online updates
- Hourly intervals or continuous updates
- Customizable block pages

### BARRACUDA NG WEB FILTER

The Barracuda NG Web Filter enables highly granular, real-time visibility into online activity, broken down by individual users and applications, letting administrators create and enforce effective Internet content and access policies.

#### **Compatibility and Licensing:**

*Available for Barracuda NG Firewall models F100 and higher, as well as all Barracuda NG Firewall virtual appliances. Unlimited user license if purchased with a Barracuda NG Firewall hardware appliance. If purchased for a virtual appliance the number of protected IPs (capacity) applies. Available as 1, 3, and 5 years subscriptions. In High Availability (HA) environments each unit needs to be licensed separately.*

## BARRACUDA NG MALWARE PROTECTION

The Barracuda NG Malware Protection provides gateway-based protection against malware, viruses, spyware, and other unwanted programs inside SMTP, HTTP, POP3, and FTP traffic.

### **Compatibility and Licensing:**

*Available for Barracuda NG Firewall models F100 and higher, as well as all Barracuda NG Firewall virtual appliances. Unlimited user license if purchased with a Barracuda NG Firewall hardware appliance. If purchased for a virtual appliance the number of protected IPs (capacity) applies.*

*Available as 1, 3, and 5 years subscriptions.*

*In High Availability (HA) environments each unit needs to be licensed separately.*

### **KEY FEATURES**

- Configurable archive recursion depth
- Quarantine functionality for proxy
- Configurable unknown archive policy
- Configurable maximum archive size
- Archiver package support
- Office file-types support
- Proactive detection of new threats
- Advanced heuristics detection techniques
- Hundreds of thousands signatures
- Multiple signature updates per day

## BARRACUDA NG WEB SECURITY

The Barracuda NG Web Security subscription option for Barracuda NG Firewall models F100 and higher includes the Barracuda NG Web Filter and Barracuda NG Malware protection, offering complete web security. Available as 1, 3, and 5 years subscriptions.

## KEY FEATURES

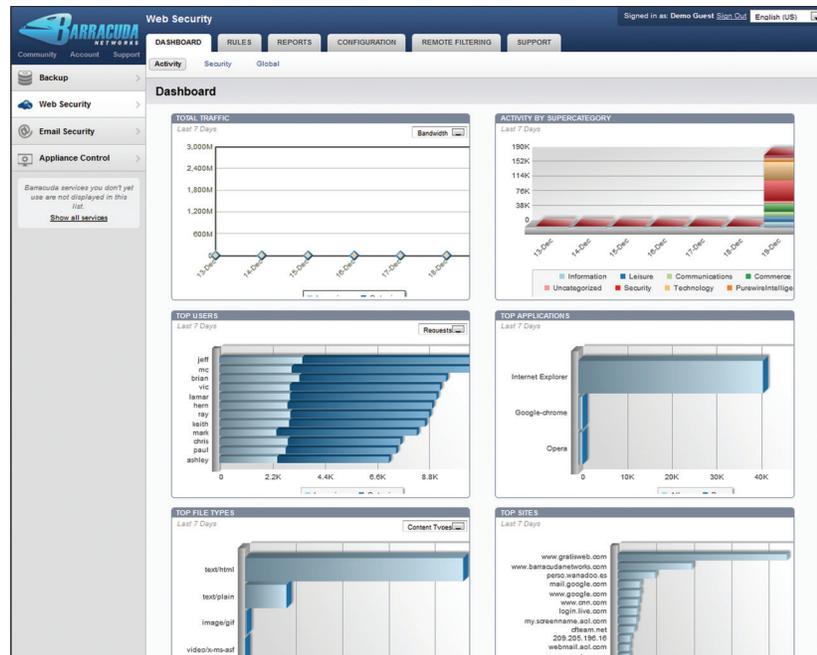

- Enables wire speed malware and content filtering
- Full web security even for low end NG Firewall units in remote locations
- Enables malware and content filtering without performance degradation of the Barracuda NG Firewall
- Malware signatures update continuously for fast response to new and known threats
- Advanced heuristics block unknown Web viruses and spyware
- AJAX-aware analysis detects malicious web apps and script-based attacks
- Full user awareness
- Centrally manageable
- Central reporting, drill down reports

## BARRACUDA WEB SECURITY SERVICE

The Barracuda Web Security Service is a cloud-based web filtering and security service that quickly gives administrators all the information and policy enforcement tools needed to protect users from Internet threats, conserve network bandwidth, and filter content for compliance and productivity. The Barracuda NG Firewall is integrated with the Barracuda Web Security Service to enable malware scanning and content filtering in the cloud and benefit from its collaborative cache for an accelerated Internet experience. The Barracuda Web Security Service provides a multitude of summary reporting and analysis tools to drill down on the details of Internet traffic.

### Compatibility and Licensing:

Available for Barracuda NG Firewall models F10 and higher, as well as all Barracuda NG Firewall Virtual Appliances. Requires the purchase of an additional Barracuda Web Security Service subscription BWUxxxx-w1/3/5 (US/CA) or BWUxxxx-w1/3/5 (International). Barracuda Web Security Service subscriptions are based on per seat (user) licensing. Barracuda Web Security Service subscription seats not used in conjunction with Barracuda NG Firewall may be used for any of the other Barracuda Web Security Service deployment options like Web Security Agent Software or Direct Cloud Redirection.

The Barracuda Web Security Service dashboard provides a drill-down view of web activity across all the users in the organization regardless of location.

# Network Access Clients

## for the Barracuda NG Firewall

Every Barracuda NG Firewall unit supports an unlimited number of VPN clients at no extra cost. The optional Barracuda NG Firewall SSL VPN and NAC subscription adds a customizable and easy-to-use web-based SSL VPN as well as sophisticated Network Access Control (NAC) functionality.

NAC allows enforcement of minimum Windows client security prerequisites before being allowed access to the network or access to a quarantine network. Security posture can be specified according to available Windows patch level, availability of anti-virus and/or anti-spyware, and user ID. Access restrictions are enforced locally on the client by the centrally managed personal Windows firewall as well as at the gateway.

### IPv6 SECURITY ENFORCEMENT

Besides providing full IPv6 support for the personal firewall, the Barracuda Network Access Client also introduces IPv6 Router Advertisement Guard, which monitors and controls IPv6 Router Advertisement (RA) messages of the IPv6 Neighbor Discovery Protocol. This effectively enables companies to protect against potential denial of service, Man-in-the-Middle, and malformed RA message attacks. Rogue Internet access points that may be appearing when using smartphones or other 3G devices connected to client machines are no longer advertised and thus sealed from the network.

Using existing Barracuda NG Firewall appliances, Barracuda Networks offers a ready-to-use Network Access Control framework without expensive investments into the basic network infrastructure.

All Barracuda Network Access Clients, as well as all Barracuda NG Firewall units acting as policy servers can be administered, monitored, and reviewed from a single Barracuda NG Control Center.

If the Barracuda NG Firewall is deployed as virtual appliance, then the respective capacity counter is used, e.g., the Barracuda NG Firewall VF25 provides up to 25 VPN clients, the Barracuda NG Firewall VF50 provides up to 50 VPN clients, and so on.

### KEY BENEFITS

- Network Access based on client health status, patch level, or presence and update status of antivirus/anti-spyware options
- Blocks or quarantines unhealthy or unknown clients
- Provides the ability to create guest networks with limited or specially defined connectivity policies
- Auto-remediation functionality makes sure antivirus/anti-spyware options at the client are up to date
- Integrated Personal Firewall to enforce access restriction rules for programs and users
- Endpoint IPv6 Router Advertisement Guard
- Provides reporting on client health status
- Provides reporting on client VLAN & port connection locations

### Compatible with

# Barracuda VPN

## Barracuda NG Control Center

Central Management across the Enterprise

AVAILABLE AS

Virtual Appliances

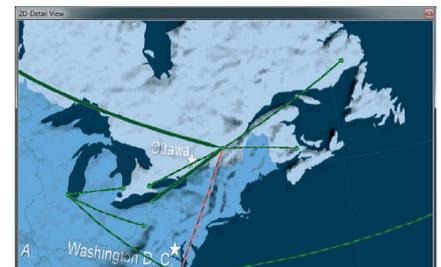

see page 27

### KEY BENEFITS

- Substantial cost benefits through industry-leading centralized management off ALL security and network functions from a single management interface
- Consistent security posture and policy enforcement across the entire enterprise
- Centralized version control of anti-spam, anti-virus, content filtering, and Network Access Control updates
- Real-time accounting and reporting across multiple gateways
- Central collection and processing of statistics
- Comprehensive history and rollback of configuration and policy changes across the network. Integrated Revision Control System for all changes to comply with governmental and company policy requirements
- Real-time 3D visualization of VPN tunnel status and easy drag & drop VPN tunnel creation
- Extended multi-tenancy capabilities catering to the needs of MSSP environments

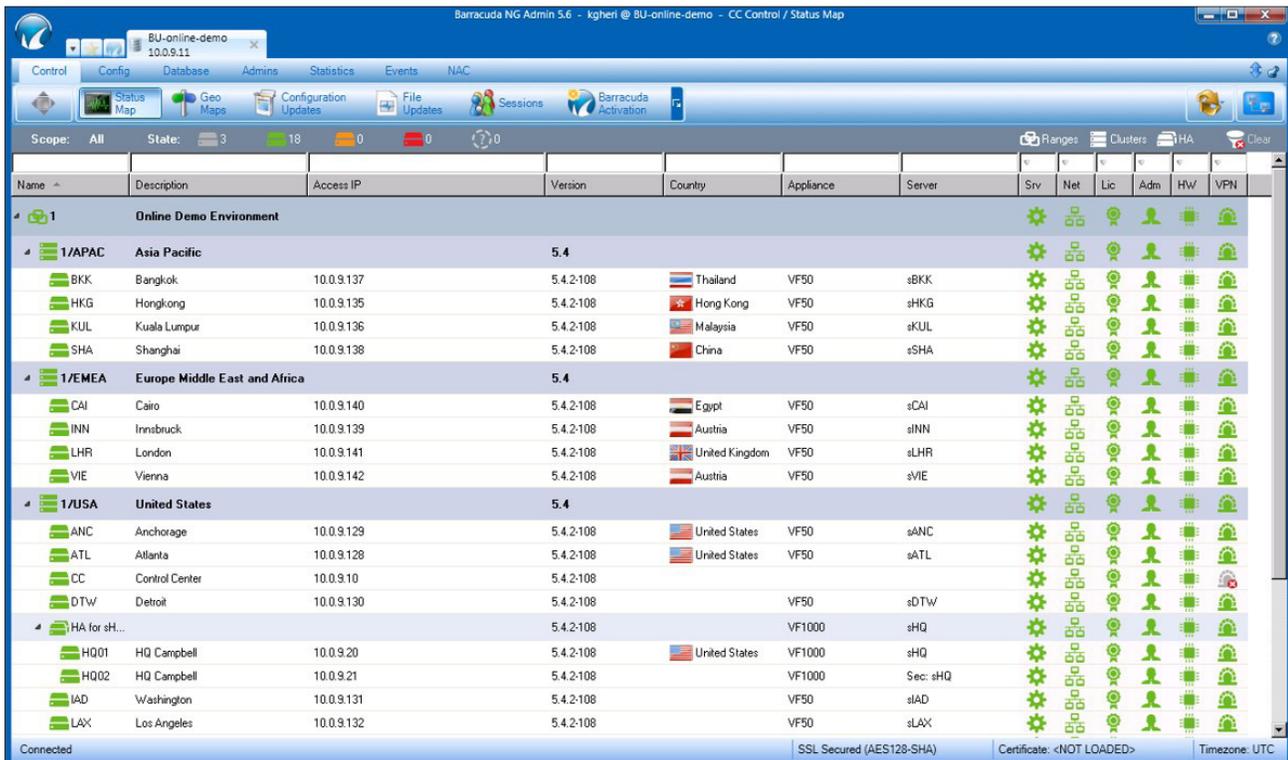

To centralize management across many different firewalls and remote access users, the Barracuda NG Control Center enables administrators to manage and configure security, content, traffic management, and network access policies from a single interface. Template-based configuration and globally available security objects enable efficient configuration across thousands of locations. The Barracuda NG Control Center helps significantly reduce the cost associated with security management while providing extra functionality both centrally and locally at the managed gateway. Software patches and version upgrades are centrally controlled from within the management console and deployment can be applied to all managed devices. Highly customizable administrative roles can be defined to delegate administrative capabilities for specific departments or locations.

The Barracuda NG Control Center is offered at three levels - Standard Edition, Enterprise Edition, and Global Edition. All Barracuda NG Control Center levels enable administration of an unlimited number of Barracuda NG Firewall platforms. The Standard Edition allows for a single configuration group. The Enterprise Edition allows for an unlimited number of configuration groups for a single enterprise / tenant or "range." The Global Edition is designed for service providers who service multiple tenants and allows for separate and secluded configuration trees for each tenant.

*Barracuda NG Earth is a graphical real-time 3D network monitoring utility that provides a status overview of all VPN site-to-site tunnels.*

# Barracuda NG Report Creator

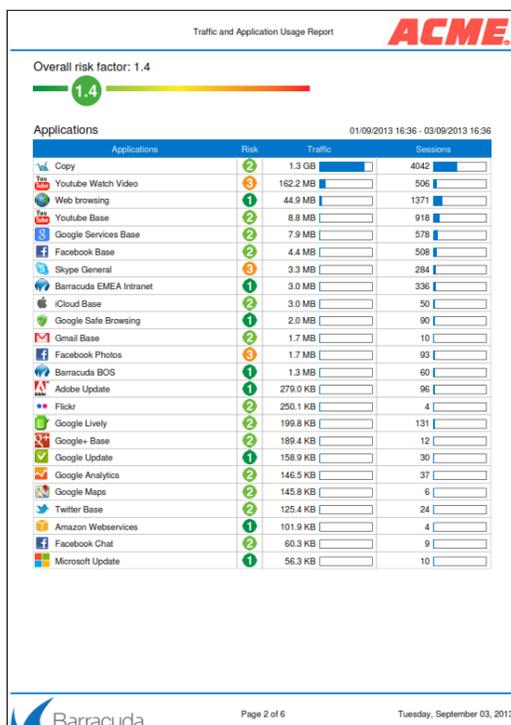

Creating C-level reports with ease - scheduled and fully automated

Reporting is one of the major tasks to be managed in an enterprise. This applies for any department and does not stop when it comes to the IT Security department. Making bandwidth usage and all other security related information visible, reportable and - not least - have it in an easy-to-read format is crucial. And having a dispersed network with loads of security gateways does not make it easier to achieve comprehensive reporting.

The Barracuda NG Report Creator makes creating such IT security reports easy. Simply select the appliances and the required type of reports, define layout and way of delivery and the report creator does the rest.

Barracuda NG Report Creator User Interface

Example of a report pdf page

## KEY BENEFITS

- Collect data from all of Barracuda NG Firewalls deployed in the network
- Create easy-to-read reports in pdf format
- Save reports and/or distribute automatically to pre-defined recipients
- Fully customizable scheduling
- Fully customizable time-span
- Report layout customizable with company logo
- Blackout IP addresses for auditing

## PRE-DEFINED REPORTS

- Top Application
- Top Allowed Applications
- Top Blocked Applications
- Top URL Categories & Websites
- Top Allowed URL Categories & Websites
- Top Blocked URL Categories & Websites

## CUSTOMIZABLE REPORTS ON

- User Activity
- URL Category
- Application Category
- Application

## KEY BENEFITS

- Consolidate physical server infrastructure in the data center
- Reduce costs and energy usage to support “green IT”
- Realize the management benefits of virtualization, including backup, disaster recovery, and dynamic resource allocation for scalability

## AVAILABLE MODELS

<sup>1</sup> Virtual Appliance models VF25 to VF1000 are limited to two CPU cores.

Model VF2000 supports 4 CPU cores, model VF4000 supports 8 CPU cores, and model VF8000 supports 16 CPU cores.

<sup>2</sup> Virtual Appliance models VF1000, VF2000, VF4000, and VF8000 have no user limitations.

# Barracuda Virtual Appliances

Virtual versions of Barracuda’s hardware appliance-based solutions

## VIRTUALIZATION

As organizations have adopted virtualization for their server infrastructures, there has been a corresponding trend to extend the benefits of virtualization to the security layer. Barracuda’s award-winning security solutions are also available as virtual appliances.

Barracuda’s virtual appliances are complete solutions, eliminating the need for installing, configuring, and integrating disparate operating system, database, system management, and application software. In addition, Barracuda’s virtual appliances come “locked down” from a security perspective, built from the ground up on the Barracuda OS, a hardened Linux operating kernel and optimized to run seamlessly within virtualized environments. Barracuda’s virtual appliances are packaged and distributed in Open Virtualization Format (OVF) or XVA to support environments such as VMware, KVM, XenServer, and Hyper-V (with release 5.4.3 scheduled for Q1 2014) respectively.

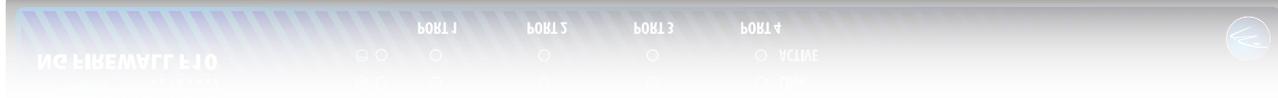

### Note:

For more details on Barracuda Virtual Appliances please visit <http://www.barracuda.com/vx>.

# Hardware Facts

for Barracuda NG Firewall

## BARRACUDA NG FIREWALL F10

INTERFACE	
Copper Ethernet NICs	4x1 GbE
USB 2.0	2
Serial / console	1 [RJ45]
PERFORMANCE [AS OF FIRMWARE RELEASE 5.4.X]	
Firewall throughput [Mbps] <sup>1</sup>	300
Firewall throughput, Jumbo Frames [Mbps]	N/A
VPN throughput [AES-128, NOHASH, Mbps]	85
VPN throughput [AES-128, MD5, Mbps]	75
VPN throughput [AES-128, SHA, Mbps]	75
VPN throughput [AES-256, MD5, Mbps]	65
IPS throughput [Mbps] <sup>1</sup>	60
Concurrent sessions	2,000
New sessions/s <sup>2</sup>	1,000
MEMORY	
RAM [MB]	512
MASS STORAGE	
Type	Flash
Size [GB]	4 or better
SIZE, WEIGHT, DIMENSIONS	
Weight appliance [kg]	2
Weight carton with appliance [kg]	3
Appliance size: width x depth x height [mm]	240 x 165 x 30
Carton size: width x depth x height [mm]	260 x 320 x 140
Form factor	Mini
HARDWARE	
Hardware crypto accelerator	Yes, built-in
Cooling	Fanless
Power supply	Single, external
ENVIRONMENTAL	
Noise emission [db/A]	< 32
Operating temperature [°C]	0 to +40
Storage temperature [°C]	-20 to +70
Operating humidity [non-condensing]	5% to 95%

MTBF [SYSTEM]	
MTBF [yrs.]	> 5
CERTIFICATIONS & COMPLIANCE	
CE emissions	Yes
CE electrical safety	Yes
FCC emissions	Yes
ROHS compliant	Yes
POWER & EFFICIENCY	
Power supply type	External brick
Power type [AC/DC]	AC
Input rating [Volts]	100-240
Input frequency [Hz]	50-60
Auto sense	Yes
Wattage / max. power draw [W]	40
Max. power draw [Amps.]	1.6
Max. heat dissipation [W]	36
Max. heat dissipation [BTU]	123
Energy efficiency [average]	>80%
PACKAGING CONTENT	
Appliance	Yes
Serial cable	Yes
Straight network cable	Yes
Cross network cable	Yes
External power brick & cables	Yes
USB flash drive for recovery & installation	Yes
Quick start guide	Yes

<sup>1</sup> Measured with large packets (MTU1500)

<sup>2</sup> Measured with TCP

## BARRACUDA NG FIREWALL F100 / F101

INTERFACE		ENVIRONMENTAL	
Copper Ethernet NICs	4x1 GbE	Noise emission [db/A]	< 32 / 45 <sup>5</sup>
USB 2.0	2	Operating temperature [°C]	0 to +40
Serial / console	1 [RJ45]	Storage temperature [°C]	-20 to +70
Integrated WiFi access point (802.11 b/g)	Model F101 only	Operating humidity [non-condensing]	5% to 95%
PERFORMANCE [AS OF FIRMWARE RELEASE 5.4.X]		MTBF [SYSTEM]	
Firewall throughput [Mbps] <sup>1</sup>	300	MTBF [yrs.]	> 5
Firewall throughput, Jumbo Frames [Mbps]	N/A	CERTIFICATIONS & COMPLIANCE	
VPN throughput [AES-128, NOHASH, Mbps]	85	CE emissions	Yes
VPN throughput [AES-128, MD5, Mbps]	80	CE electrical safety	Yes
VPN throughput [AES-128, SHA, Mbps]	78	FCC emissions	Yes
VPN throughput [AES-256, MD5, Mbps]	70	ROHS compliant	Yes
IPS throughput [Mbps] <sup>1</sup>	60	POWER & EFFICIENCY	
Concurrent sessions	8,000	Power supply type	External brick
New sessions/s <sup>2</sup>	1,500	Power type [AC/DC]	AC
MEMORY		Input rating [Volts]	100-240
RAM [GB]	2	Input frequency [Hz]	50-60
MASS STORAGE		Auto sense	Yes
Type	Flash	Wattage / max. power draw [W]	60
Size [GB]	4 or better	Max. power draw [Amps.]	1.6
SIZE, WEIGHT, DIMENSIONS		Max. heat dissipation [W]	60
Weight appliance [kg]	3.5	Max. heat dissipation [BTU]	205
Weight carton with appliance [kg]	5.5	Energy efficiency [average]	>83%
Appliance size: width x depth x height [mm]	374 x 190 x 50	PACKAGING CONTENT	
Carton size: width x depth x height [mm]	470 x 355 x 180	Appliance	Yes
Form factor	Compact	Serial cable	Yes
HARDWARE		Straight network cable	Yes
Hardware crypto accelerator	Yes, built-in	Cross network cable	Yes
Cooling	Fanless <sup>3</sup>	External power brick & cables	Yes
Power supply	Single, external	USB flash drive for recovery & installation	Yes
		Quick start guide	Yes
		Wireless antenna	Yes, for F101 only
		Barracuda 19" rackmount shelf kit	Optional

**Note:**

While it is technically feasible and fully supported to run the Barracuda NG Malware Protection and the Barracuda Web Filter on this unit, Barracuda Networks recommends offloading Malware Protection and Web Filter functions to the Barracuda Web Security Service for best performance.

<sup>1</sup> Measured with large packets (MTU1500)

<sup>2</sup> Measured with TCP

<sup>3</sup> If model F101 is ordered with the Barracuda ISDN PCI Modem M20, a low noise fan will be installed to make sure the heat generated by the data card during extended operation can be dissipated.

## BARRACUDA NG FIREWALL F200 / F201

**INTERFACE**

Copper Ethernet NICs	4x1 GbE
USB 2.0	2
Serial / console	1 [RJ45]
Integrated WiFi access point (802.11 b/g)	Model F201 only

**PERFORMANCE [AS OF FIRMWARE RELEASE 5.4.X]**

Firewall throughput [Mbps] <sup>1</sup>	400
Firewall throughput, Jumbo Frames [Mbps]	N/A
VPN throughput [AES-128, NOHASH, Mbps]	120
VPN throughput [AES-128, MD5, Mbps]	110
VPN throughput [AES-128, SHA, Mbps]	110
VPN throughput [AES-256, MD5, Mbps]	100
IPS throughput [Mbps] <sup>1</sup>	80
Concurrent sessions	35,000
New sessions/s <sup>2</sup>	2,500

**MEMORY**

RAM [GB]	2
----------	---

**MASS STORAGE**

Type	Solid State
Size [GB]	40 or better
SSD MTBF [hours]	1,200,000

Weight carton with appliance [kg]	7.46
Appliance size: width x depth x height [mm]	406 x 425 x 44
Carton size: width x depth x height [mm]	483 x 565 x 178
Form factor	1U Full Size
ENVIRONMENTAL	
Noise emission [db/A]	N/A
Operating temperature [°C]	0 to +35
Storage temperature [°C]	-20 to +70
Operating humidity [non condensing]	5% to 95%

CERTIFICATIONS & COMPLIANCE	
CE emissions	Yes
CE electrical safety	Yes
FCC emissions	Yes
ROHS compliant	Yes
POWER & EFFICIENCY	
Power supply type	Single, internal
Power type [AC/DC]	AC
Input rating [Volts]	100-240
Input frequency [Hz]	47-63
Auto sense	Yes
Max. power draw [Amps.]	1.8
PACKAGING CONTENT	
Appliance	Yes
Direct power to wall outlet	Yes
USB flash drive for recovery & installation	Yes
Quick start guide	Yes
2x Barracuda L-shape rack mount bracket	Yes

## BARRACUDA NG CONTROL CENTER C610

**INTERFACE**

Copper ethernet NICs	2x1 GbE
USB 2.0	2
Serial	1 [DB9]

**MEMORY**

RAM [GB]	4
----------	---

**MASS STORAGE**

Type	HDD
Size [GB]	4x 500 or better
Redundant Disk Array (RAID)	RAID 5

**SIZE, WEIGHT, DIMENSIONS**

Weight appliance [kg]	18
Weight carton with appliance [kg]	28.5
Appliance size: width x depth x height [mm]	648 x 442 x 89
Carton size: width x depth x height [mm]	870 x 680 x 286
Form factor	2U Full Size

**ENVIRONMENTAL**

Noise emission [db/A]	N/A
Operating temperature [°C]	0 to +40
Storage temperature [°C]	-20 to +70
Operating humidity [non condensing]	5% to 95%

**CERTIFICATIONS & COMPLIANCE**

CE emissions	Yes
CE electrical safety	Yes
FCC emissions	Yes
ROHS compliant	Yes

**POWER & EFFICIENCY**

Power supply type	Dual, internal
Power type [AC/DC]	AC
Input rating [Volts]	100-240
Input frequency [Hz]	47-63
Auto sense	Yes
Max. power draw [Amps.]	4.1

**PACKAGING CONTENT**

Appliance	Yes
Direct power to wall outlet	Yes
USB flash drive for recovery & installation	Yes
Quick start guide	Yes
2 x Barracuda L-shape rack mount bracket	Yes
Barracuda Rail kit	Yes

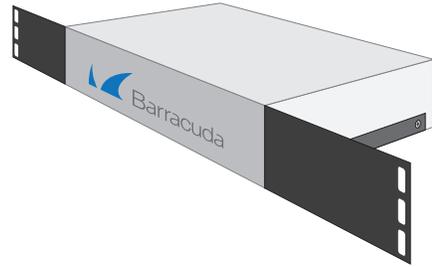

## BARRACUDA 19" RACKMOUNT SHELF KIT

The Barracuda Rackmount Shelf Kit is a field upgrade to deploy Barracuda NG Firewall models F100, F101, F200, and F201 into a 19-inch rack environment.<sup>1</sup>

## BARRACUDA L-SHAPE RACKMOUNT BRACKET

The L-shape rackmount bracket enables Barracuda Firewall F280 to be mounted in a 1U Standard 19" Rack slot.

## BARRACUDA 3G/UMTS USB MODEM M10

The Barracuda 3G/UMTS Modem M10 provides support for wireless third generation broadband communication using 3G/UMTS/HSDPA/HSUPA technologies thus providing bandwidths of up to 7.2 Mbps. Especially for remote sites the Barracuda 3G/UMTS Modem M10 is a cost effective, rapidly deployable and ultra-reliable WAN backup solution which can protect businesses and organizations against outages caused by accidental cable or fiber link cuts during construction, moves or maintenance work.

### Who can benefit from the Barracuda 3G/UMTS USB Modem M10?

- Enterprises looking for a cost effective secondary link in order to quickly increase total overall bandwidth and to reduce traffic volume on the primary link
- Enterprises relying on high quality WAN backup and WAN connectivity for business critical traffic
- Branch offices and remote sites looking for a cost effective alternative to earth bound uplinks
- Branch offices and remote sites looking to bridge the gap until cable connections become available
- Branch offices and remote sites residing in areas without a good selection of affordable or reliable Internet uplinks
- Construction sites, retail, rapid deployments and portable businesses requiring quick access to Internet connectivity

### Remote Appliance Control via Cell Phone Interaction

The Barracuda 3G/UMTS USB Modem M10 can also be used as a remote control to securely trigger predefined commands via cell phones and smart phones which carry out the following restorative operations on the firewall gateway:

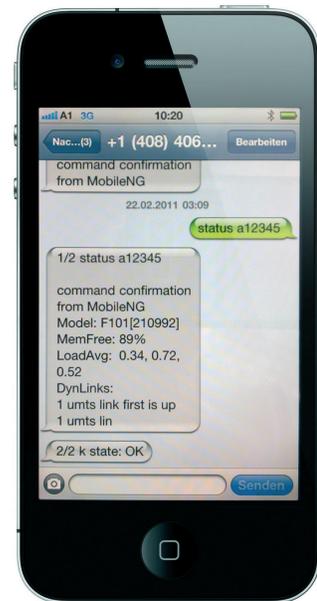

- Reboot/restart the services
- Rebuild the management tunnel connection
- Shutdown and bring up again the entire network stack

In addition, administrators can trigger the Barracuda 3G/UMTS USB Modem M10 to send a status message to the cell phone of the administrator which includes vital information such as firewall gateway state and link details in case the firewall gateway is no longer remotely accessible or the administrator quickly wants to check the status while being on the road.

An intelligent combination of security checks such as support of a phone number ACL, password protection on a per command basis as well as a maximum successive number of commands counter assure that there is virtually no abuse potential and remote DOS attacks are ruled out.

#### Note:

*Barracuda Networks cannot guarantee signal reception. In case your server rooms are located in a basement or in a place with insufficient signal reception make sure that the signal quality is sufficient, especially prior to purchasing large quantities. The firmware version needs to be 5.0.2 or higher. The SIM card is not included and has to be obtained independently through a mobile phone provider.*

<sup>1</sup> The rack mount kit will require 2 1U slots in a rack in height as the F100/F200 units themselves are larger than 1U.

## BARRACUDA NETWORK MODULE M801

Optional network module providing 8x1 GbE RJ45 copper ports.  
Available for Barracuda NG Firewall models F800 and F900.

M801

## BARRACUDA NETWORK MODULE M802

Optional network module providing 4x1 GbE fiber slots for standard SFP type transceivers (compatible with SR and LR transceivers).

Available for Barracuda NG Firewall models F800 and F900 for self-installed field upgrades.

M802

## BARRACUDA NETWORK MODULE M803

Optional network module providing 2x10 GbE fiber ports for standard SFP+ type transceivers (compatible with SR and LR transceivers).

Available for Barracuda NG Firewall models F800 and F900.

M803

**Note:**

Transceivers have to be bought separately and are not included in the Network Modules M802 and M803.

**Note:**

All Barracuda Network Modules (M801-M803) are covered by Instant Replacement subscription of the appliance at no extra charge.

## Additional Hardware Options

## SUPPORTED BARRACUDA NETWORK MODULE COMBINATIONS

(firmware release 5.4.x and newer)

### MODEL F600

The F600 standard model C10 is always shipped with a total of 12 RJ45 network ports and single power supply.

Other F600 model types provide different port and power supply combinations. Please see list below.

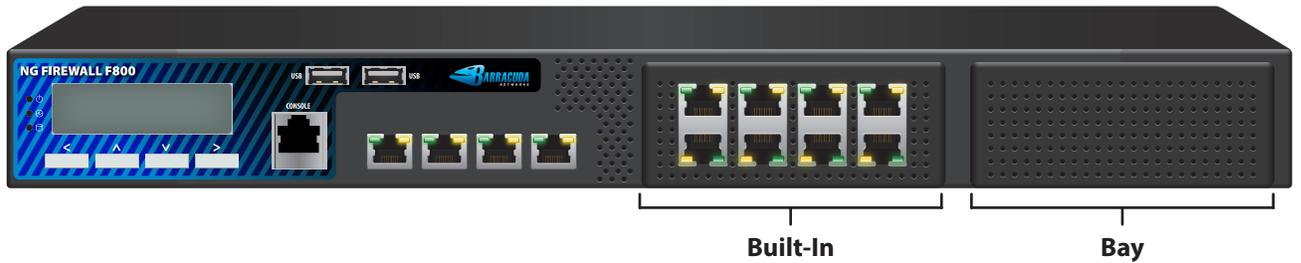

**Note:**

Network ports are built-in and not replaceable in the field. Spare parts for redundant power supply can be ordered separately.

F600 MODEL TYPE		ORDER NO. EMEA / INTERNATIONAL	ORDER NO. NORTH AMERICA
Front	Barracuda NG Firewall F600 model C10 (12 RJ45 network ports and single power supply)	BNGIF600a.C10	BNGF600a.C10
Rear			
Front	Barracuda NG Firewall F600 model C20 (12 RJ45 network ports and dual power supply)	BNGIF600a.C20	BNGF600a.C20
Rear			
Front	Barracuda NG Firewall F600 model F10 (8 RJ45 + 4 SFP 1 GbE network ports and single power supply)	BNGIF600a.F10	BNGF600a.F10

Front	Barracuda NG Firewall F600 model F20 (8 RJ45 + 4 SFP 1 GbE network ports and dual power supply)	BNGIF600a.F20	BNGF600a.F20
Rear			
Front	Barracuda NG Firewall F600 model E20 (8 RJ45 + 2 SFP+ 10 GbE network ports and dual power supply)	BNGIF600a.E20	BNGF600a.E20
Rear			

## MODEL F800

The standard version of the F800 appliance has the first port bracket bay equipped with eight 1 GbE RJ45 copper ports (Barracuda Network Module M801) while the second port bracket is covered with a faceplate.

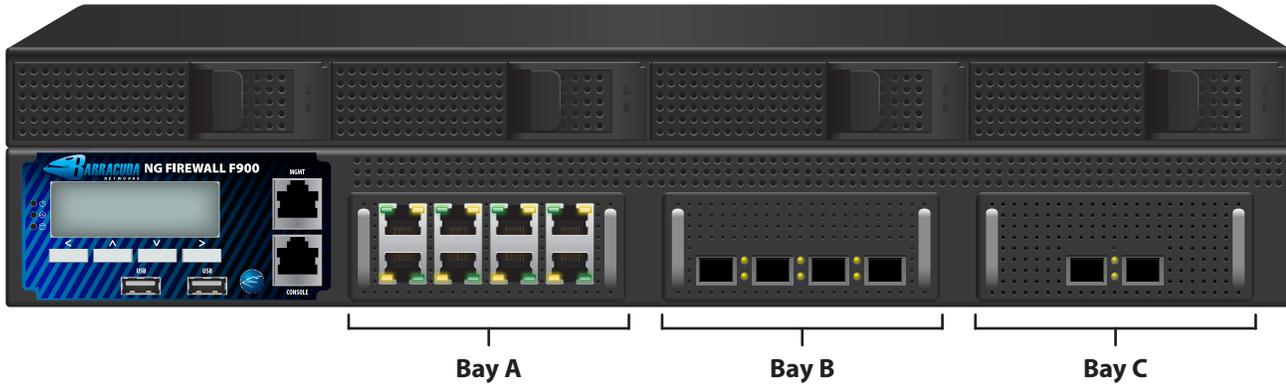

### Legend:

- M801 - Barracuda Network Module with 8x1 GbE RJ45 copper ports
- M802 - Barracuda Network Module with 4x1 GbE SFP
- M803 - Barracuda Network Module with 2x10 GbE SFP+

BAY	ORDER NO. EMEA / INTERNATIONAL	ORDER NO. NORTH AMERICA

## MODEL F900

The F900 provides three port bracket bays for Barracuda Network modules M801, M802, and M803. The standard version of the F900 appliance has only the management port, while the three port bracket bays are, unlike in the figure below, empty and covered with faceplates.

### Legend:

- M801 - Barracuda Network Module with 8x1 GbE RJ45 copper ports
- M802 - Barracuda Network Module with 4x1 GbE SFP
- M803 - Barracuda Network Module with 2x10 GbE SFP+ (10 Gbps)

# Licensing

## ACTIVATION

Barracuda NG Firewall appliances and Barracuda NG Firewall Control Centers, regardless if shipped as a hardware or virtual appliance, need to be activated to function properly. Upon login with the NG Admin management tool, the activation process will start and retrieve the needed license files automatically. If not done before, the user may need to fill in a form and accept the End User License Agreement (EULA) in the process. For Barracuda NG Firewall Vx editions a "License Token" will be sent out via email for verification before the actual activation. The Barracuda NG Control Center may perform an activation on behalf of a Barracuda NG Firewall, even if the actual unit is not yet online or known to the Barracuda NG Control Center. For more details please see below:

## BARRACUDA NG FIREWALL AND NG CONTROL CENTER HARDWARE UNITS

For the Barracuda NG Firewalls to retrieve the licenses automatically via auto activation, an administrator needs to connect to the appliance using the NG Admin management tool. The workstation that NG admin is used on needs to be able to access the Internet to carry out activation and license retrieval on behalf for the accessed unit. By default, the activation procedure starts automatically after 30 seconds. It can also be started manually on the NG Admin "Status" page. During activation all available licenses will be transferred and stored in the licenses configuration node on the Barracuda NG Firewall. This procedure may be repeated several times, but only new licenses (e.g., license renewals or purchases of additional license subscriptions) these will be retrieved.

## BARRACUDA NG FIREWALL VX AND NG CONTROL CENTER VX

For Barracuda NG Firewall Vx editions, the NG Admin management tool will ask for a license token before activation. At this point the license token that was distributed via email needs to be entered. The license token is usually a simple text string containing letters and numbers separated by dashes like E6NEN-H5H69-62WKY. Upon entering the license token, the MAC address of your virtual machine will be retrieved and licenses will be issued based on this MAC address and provided to the NG Firewall Vx. The VMware machine will also receive a unique serial ID that you will need for future downloads of IPS updates, content security updates, and license extensions.

The license token may be entered several times, but only during the first use new licenses will be retrieved. For subsequent use of the license token, the procedure will retrieve the licenses issued earlier.

**Note:**

*The activation date determines the start date for the following subscriptions: Energize Updates (incl. IPS), NG Web Filter, NG Malware Protection, NG Web Security, SSL VPN, and NAC.*

## BASE LICENSES FOR BARRACUDA NG FIREWALL UNITS

This license contains unlimited users (protected IPs, VPN tunnel, and VPN clients) without a limit on concurrent connections. The license is associated with a hardware ID and model of the machine it was issued for. Typically, a MAC address of a network card is used as the key for the license. The generated license file is transferred to the unit during the activation procedure.

**Note:**

*The Barracuda NG Firewall hardware detection function will carry out a compatibility check upon installation. If the base license does not match the actual hardware model, the system will enter a 15-day "grace period". After 15 days the Barracuda NG Firewall will stop forwarding any traffic.*

## BASE LICENSES FOR BARRACUDA NG FIREWALL VX UNITS

The base licenses for virtual appliances allow the installation of a Barracuda NG Firewall on supported virtualization solutions and support a specific number of CPU cores. The base licenses are limited by the defined capacity numbers contained in their names, e.g., for the Barracuda NG Firewall VF25 the capacity limit is 25. The only exemptions are editions VF1000, VF2000, VF4000, and VF8000 which include unlimited user licenses.

Capacity is tracked by the firewall based on concurrent usage and entails firewall traffic (protected IPs), application traffic (e.g., through the proxy or FTP gateway), and any SSL VPN or client VPN traffic.

EDITION	CAPACITY	NO. OF SUPPORTED CPU CORES
VF25	25	2
VF50	50	2
VF100	100	2
VF250	250	2
VF500	500	2
VF1000	No limit	2
VF2000	No limit	4
VF4000	No limit	8
VF8000	No limit	16

**Note:**

Timeout for firewall traffic is 60 minutes, SSL VPN timeout is 30 minutes, client VPN timeout is immediate.

## BARRACUDA NG FIREWALL SUBSCRIPTIONS AND RESPECTIVE LICENSE CAPACITIES

SUBSCRIPTION	HARDWARE APPLIANCES (IF APPLICABLE)	VIRTUAL APPLIANCES
Barracuda NG Web Filter	No limit	limited by capacity or CPU cores
Barracuda NG Malware Protection	No limit	limited by capacity or CPU cores
Barracuda NG Web Security	No limit	limited by capacity or CPU cores
Barracuda NG SSL VPN and NAC	No limit	limited by capacity or CPU cores

**Note:**

It is not possible to mix models with subscriptions from other models. For example a VF250 base license cannot be mixed with the Barracuda NG Web Security subscription of VF500.

## FORMAT OF LICENSES

All Barracuda NG Firewall licenses are x.509 certificates issued and signed by the Barracuda Networks Certificate Authority. Because all Barracuda NG Firewall products have the Barracuda Networks public key built into the product, they can easily validate the certificates and extract the license information.

## SYSTEM BEHAVIOR WITH INVALID OR MISSING LICENSES

### Evaluation mode

Even without a valid license the Barracuda NG Firewall system will provide almost all relevant features. Nevertheless, the system is not intended to serve any other purpose than evaluation. Please take into consideration that systems in evaluation mode provide only weak encryption & authentication methods (DES, RSA-512).

**Note:**

*In this mode the default password for the root account will always be accepted, even if it was changed before.*

### Grace Period

In the case of a hardware failure or transfer of service to another appliance, a license strictly bound to a MAC address results in a loss of service. For this reason, almost every issued Barracuda NG Firewall license has a “grace period” (typically 15 days). During this time, the Barracuda NG Firewall works according to the parameters defined in the license, even if the hardware ID that the license is attached to does not match the actual hardware. If this happens, please contact your local Barracuda Networks sales team or Barracuda Networks partner immediately to obtain a new license.

### CPU core restricted licenses

Licenses with a restriction on the number of supported CPU cores (such as licenses for virtual machines) are immediately invalid without grace mode if the available number of CPU cores exceeds the number of CPU cores specified in the license.

### Evaluation licenses

Evaluation licenses provide access to the full feature set of the Barracuda NG Firewall but are time limited. Please note that upon expiration of such a license the Barracuda NG Firewall will NOT stop forwarding traffic, but any configuration changes (with the exception of entering a license / activating) or online updates will be prevented.

# Ordering Information

## Calculation of co-terminus subscriptions:

To allow customers to consolidate their maintenance and subscription offerings to a single end or renewal date, daily rates for all subscription types are offered. These daily rates should be used to extend expiring subscriptions to coincide with the dates of subscriptions expiring in the future. Barracuda Networks does credit early termination of subscriptions using these daily rates.
